# Confectionery

## How our substrates are composed

The diagram (shown on the left) illustrates example of the most common structure for each product category.

## Coin Foil

A reel-fed material with specially developed aluminium alloy. Thickness from 25 to 80 $\mu$ . Single or double side printed

- Reel-fed material
- Special alloy
- Rotogravure printing on both sides in one pass

## Bars

Aluminium/Paper or Aluminium/Film laminate in reels. Depending on application requirement in wax or glue lamination and tamper protection

- Reel-fed material
- Aluminium / Paper laminate (glue or wax)
- Rotogravure printing up to 8 colours, multi-side printing available in one pass
- Excellent dead fold properties

## Eggs and Pralines

Printed or lacquered aluminium foil in thickness 6 - 15 $\mu$ . Bespoke tailor-made aluminium alloy

- Reel or sheet fed material
- Unsupported foil gauge starting from 6 $\mu$
- Rotogravure printing up to 8 colours, multi-side printing available in one pass
- Embossed patterns available
- Excellent dead fold properties

## Tablet Inner Wrap

Chocolate bar wrapper with aluminium (laminated or unsupported). Printed, lacquered, heat-sealable, un-lacquered, embossed or un-embossed

- Unsupported and laminated reel-fed aluminium packaging
- Rotogravure printing up to 8 colours, multi-side printing available in one pass
- Heat-sealable version available

## Chewing Gum Inner Wrap

Aluminium/Paper laminate - wax or glue application. The material is lacquered or printed and/or embossed

- Excellent machine performance for high speed application
- Proven product protection
- Aluminium / paper laminate (glue or wax)
- Rotogravure printing up to 8 colours, multi-side printing available in one pass
- Bespoke embossed patterns available
- Excellent dead fold properties

## Chewing Gum Blister Foil

Blister reel-fed aluminium-based for chewing gum dragees. Soft or hard aluminium foil with special alloy. Single or double side printed. Bespoke sealing lacquer options

- Soft or hard temper aluminium
- Heat sealing to PET, PS, PP, PVC
- Rotogravure printing up to 8 colours, multi-side printing available in one pass

## Tube Inner Wrap

Great primary confectionery protection properties, with tamper protection features

- Aluminium / paper laminate (glue or wax) • Aluminium / film laminate (wax) • Rotogravure printing up to 8 colours, multi-side printing available in one pass and heat-seal temper evidence option.

## Twistable Film

Metallised Twist solutions available for specific customer requirements

- Superb Twisting and dead fold properties • Proven processing qualities on modern high speed lines and also on older lines
- Superior yield compared to other materials • Great gloss, high transparency • Various thicknesses from 18 µm - 40 µm available • Printed and / or lacquered

## Hollows, Seasonal & Promotional

All type of hollow figurines or seasonal products such as Easter eggs, mostly chocolate products using following range of material options

- Starting from 6µ foil gauge • Rotogravure printing up to 8 colours, multi-side printing available in one pass • Different alloys or even laminate structures available on demand giving a range of properties • Excellent dead fold properties

## Advent Calendar Foil

Heat-sealable blister foils for the use of advent calendars with excellent adhesion to various substrates

- Blister foil starting from 12µ foil gauge
- Heat sealable to PS, PE, PP or other

**Overview of Confectionery products range**

Below is an illustrative overview of the basic product range for this market with available functional or structural options:

	Alu - unsupported	Printed Aluminium	Alu / Paper Laminate	Alu / Film Laminate	Heat-seal option	Emboss
Eggs & Pralines	●	●				●
Bars	●	●	●	●	●	●
Tablet Inner Wrap	●	●	●		●	●
Twistable Film	●	●	●	●		
Coin Foil	●	●			●	●
Advent Calendar Foil	●	●			●	
Chewing Gum Inner Wrap			●			●
Chewing Gum Blister Foil	●	●	●		●	
Tube Inner Wrap	●	●	●	●	●	●
Hollow Figures	●	●	●	●	●	●
